

Multiply Monsters

Teacher Guide

Everything you need to run live Battle Mode showdowns and keep an eye on your students' progress with the Teacher Portal — no training required (except math training 🧐).

v4.0.3

Hi there, Teacher! 🙌

Multiply Monsters has two classroom superpowers. Use them together or separately — this guide walks through both, step by step, with real screenshots so you always know what you're looking at.

Battle Mode
Live, teacher-led classroom
battles

Teacher Portal
See how every student is doing

Solo & Squad modes
Practice anytime, battle friends

Battle Mode, step by step — create a session, share the code, watch the leaderboard live

Teacher Portal, step by step — create your account, link your students, download reports

Tips for the classroom — division toggle, replaying instantly, ending early

Quick FAQ — common questions, answered fast

Good to know: Multiply Monsters also has **Squad Showdown** — a student-led, friend-vs-friend battle mode students can start on their own, no teacher required. It's not covered in this guide since it doesn't need you at all, but your students will probably find it. 👁️

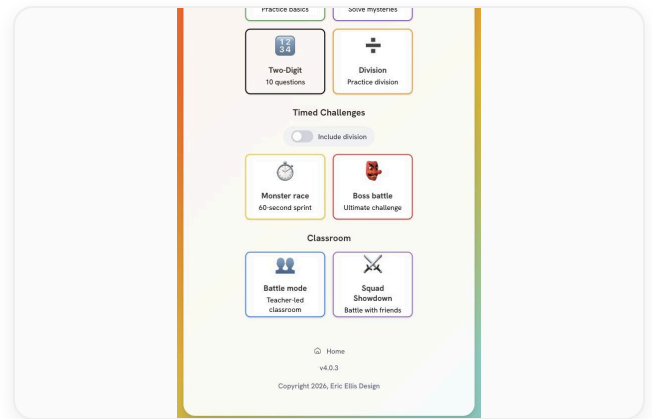

Battle Mode

A live, teacher-led math showdown for your whole class

You create a session, your students join with a short code, and everyone races the clock together. You get a live leaderboard as it happens — no grading, no waiting.

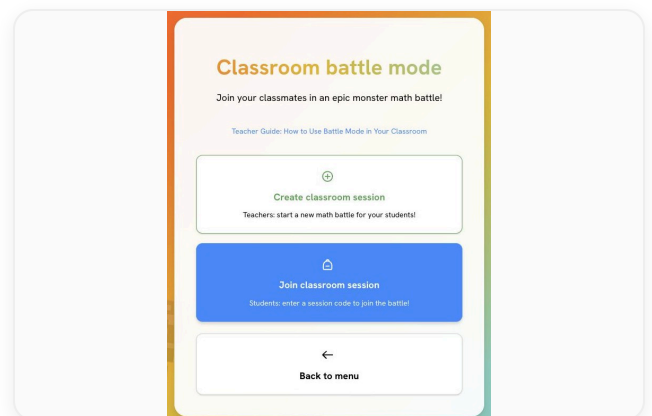

1 Find Battle Mode

From the main menu, scroll to the **Classroom** section and tap **Battle mode**. This is the teacher-led mode — Squad Showdown next to it is the student-led one.

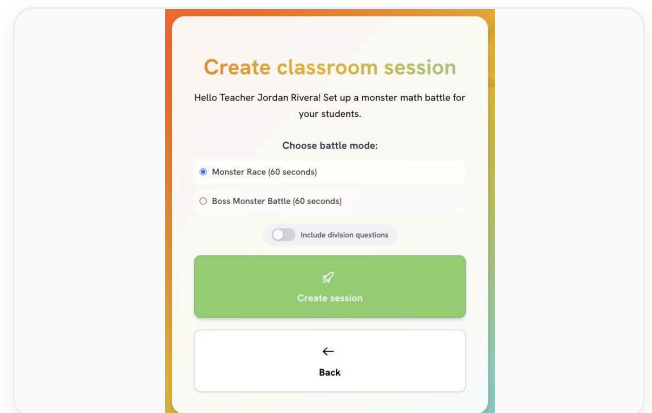

2 Choose your role

Tap **Create classroom session**. Your students will tap **Join classroom session** on their own screens once you share the code — more on that in Step 4.

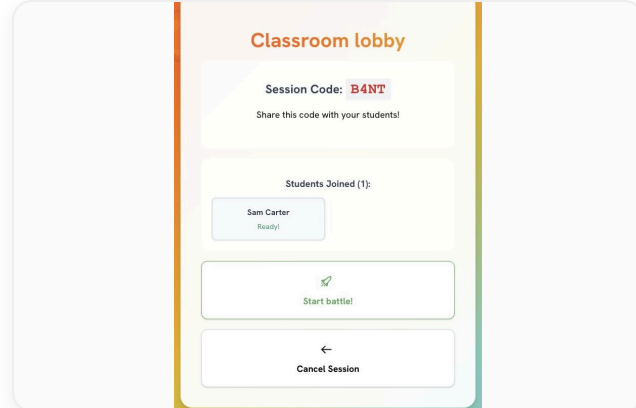

3 Pick a battle type

Choose **Monster Race** (straight multiplication, 60 seconds) or **Boss Monster Battle** (a tougher factor range, also 60 seconds). Flip on **Include division questions** if your class is ready to mix it in.

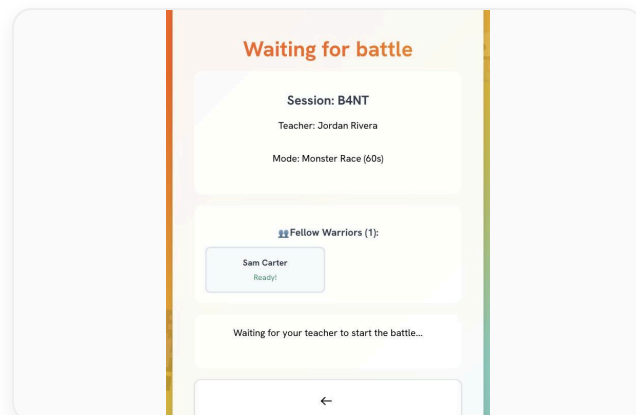

4 Share your code

Every session gets a short 4-character code — write it on the board or read it out loud. Students type it into **Join classroom session**, and their names pop up in your lobby in real time.

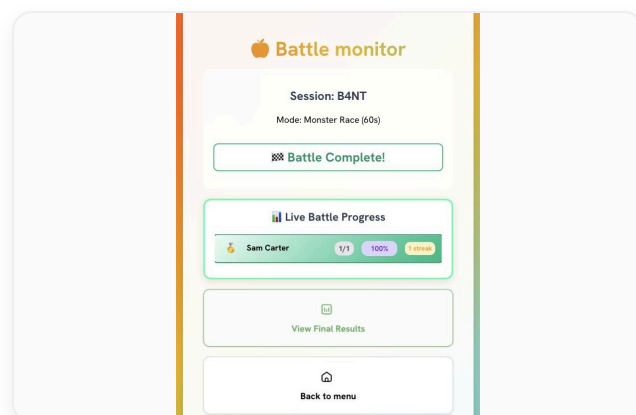

5 Everyone's ready — start!

While students wait, they see the session code, your name, and everyone else who's joined. When your roster looks right, hit **Start battle!** A 3-2-1 countdown plays for everyone at once.

6 Watch it live

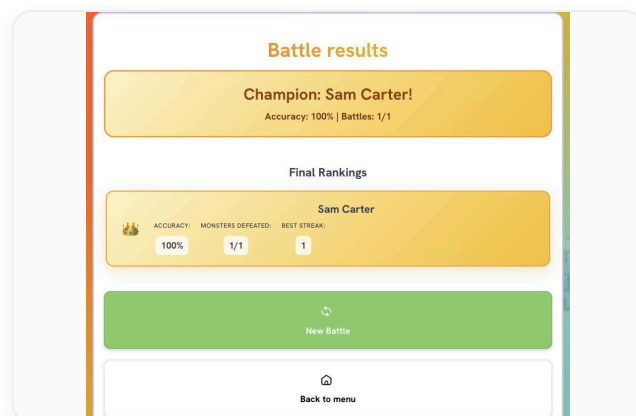

You get a real-time **Battle monitor** with every student's score, accuracy, and streak, sorted by who's winning. No need to walk around checking papers!

Need to stop early? The monitor has an **End battle now** button while a round is running — handy if the bell rings mid-battle.

7 Celebrate the champion

When time's up, everyone sees the final leaderboard: accuracy, monsters defeated, and best streak. It's the same screen for you and your students, so there's nothing extra to share.

⚡ **Play again in seconds:** Tap **New Battle** on the results screen to start another round with the exact same class — same code, same students, everyone's score reset to zero. Nobody has to re-type the code or rejoin.

Teacher Portal

A free account that tracks how your students are doing — everywhere in the app

The Teacher Portal isn't just for Battle Mode — it quietly logs **every** game mode a linked student plays: solo practice, timed challenges, Squad Showdown, and Battle Mode. One dashboard, the whole picture.

Training

Monster Race

Boss Battle

Monster Detective

Two-Digit Multiplication

Division

Squad Battle

Squad Survival

1 Create your account

From the name-entry screen, tap **Teacher Portal** at the bottom, then switch to **Create Account**. Give it your display name (this is what students will see in their dropdown), your email, and a password. That's it — you're in.

2 Come back anytime

Already have an account? Tap **Teacher Portal** and use the **Log In** tab with your email and password.

3 Students link themselves to you

The first time a student types their name, they'll see a **Who's your teacher?** dropdown listing every registered teacher. Once they pick you, everything they play gets logged to your dashboard automatically — no roster to build by hand.

4 Check your dashboard

Log in and you'll land here: one row per day, for the last 30 days, for every day at least one linked student played. Nothing yet? It just says so — the moment a student finishes (or even exits early), a row appears.

5 Download a day's report

Tap **Download CSV** on any day to get a spreadsheet — one row per student, ready to drop into a gradebook or share at conferences.

Column	What it shows
Student name	Exactly as they typed it
Session duration	Total time played that day, across every mode
Modes attempted	Every mode they touched that day
Monster Race best %	Their highest accuracy in that mode
Boss Battle best %	Their highest accuracy in that mode

Tips for the Classroom

A few small things that make a big difference

 **Get everyone linked early.** Have students pick your name from the dropdown the very first time they sit down — even before their first Battle Mode session — so nothing gets missed on your dashboard.

 **Names matter.** Ask students to use the same first + last name every time. The dashboard groups everything by exactly what they typed, so "Sam C." and "Sam Carter" show up as two different students.

 **60 seconds goes fast.** Both Battle Mode formats are one-minute sprints. It's plenty of time for a quick brain break between lessons, but short enough that nobody gets restless.

 **Rematches are instant.** Use **New Battle** after a round to go again immediately — great for best-of-three between two classes or table groups.

 **Ease into division.** Leave the division toggle off for the first few battles, then turn it on once multiplication facts feel solid — it mixes in automatically, no separate mode to explain.

 **One code per session.** A new Create classroom session always makes a brand-new code. If you cancel a session by accident, just create another — students simply enter the new code.

Quick FAQ

Answers to the questions we hear most

? A student says the code isn't working.

Double-check they're on **Join classroom session** (not Squad Showdown's join screen — those codes are only 3 characters, Battle Mode codes are 4). Codes are also case-insensitive, so typos in capitalization are never the problem.

? I don't see my name in a student's teacher dropdown.

The dropdown only lists teachers who've created a Teacher Portal account. If you haven't signed up yet, do that first — the list updates instantly for everyone after that.

? Does the Teacher Portal track Squad Showdown too?

Yes! Any linked student's Squad Battle or Squad Survival games show up on your dashboard right alongside their Battle Mode and solo practice — even though Squad Showdown itself doesn't need a teacher to run.

? Can I see results from more than 30 days ago?

The live dashboard shows a rolling 30 days. If you'll want a longer history, get in the habit of downloading each day's CSV and saving it wherever you keep your records.

? What devices does this work on?

Any modern browser — Chromebooks, tablets, laptops. No install needed for students or for you.

? Something still isn't working right.

There's a floating feedback button on the main menu for reporting bugs or asking questions — we'd rather hear about it than have you stuck.
